Education

University of Michigan

Ann Arbor, MI

Bachelor of Science in Engineering (BSE), Computer Science

August 2023 – May 2027

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Web Systems, Machine Learning, Database Management Systems, Computer Organization, Statistics and Data Analytics, Linear Algebra, Game Engine Architecture

Experience

Frontend Research Assistant

Ann Arbor, MI

Radiological Health Engineering Lab, University of Michigan

May 2026 – Present

Technologies: React, Vite, Flask, Python, TypeScript, Next.js, MUI, Plotly.js, WordPress REST API

- Rebuilt a Raspberry Pi radiation-detector dashboard as a React SPA with live recording charts, calibration workflows, and CSV/data download, replacing a legacy interface used by lab researchers
- Diagnosed a production data-corruption bug by tracing malformed GPS entries to stray hotspot traffic hitting the Flask backend's catch-all route, restoring data integrity across all device recordings
- Built a REST proxy and TypeScript parsing layer connecting a WordPress-hosted dashboard to a weather/radiation station's sensor API, normalizing hardware sentinel values with fallback handling for reliable live display

AI Engineering Intern

Beijing, China

NetEase YouDao – R&D Team

May 2025 – August 2025

Technologies: PyTorch, Transformers/Hugging Face, Python, GPT-4/LLM APIs, CUDA, Pandas/NumPy

- Developed machine translation quality estimation framework for Tibetan-Chinese language pairs, implementing state-of-the-art metrics (COMET, chrF++, BERTScore, NLLB-200) to benchmark translation quality across 1,000+ test samples
- Built an automated LLM evaluation system using GPT-4 and Deepseek-v3, replacing most manual expert review through iterative prompt engineering
- Designed a statistical validation framework (Pearson, Spearman, Kendall's tau) benchmarking automated metrics against human judgments to identify translation model weaknesses

Operations Team Intern

Shenzhen, China

Tencent Cloud – CSIG Cloud Product Department

May 2024 – July 2024

Technologies: Python, Tencent HunYuan AI API, SQL

- Analyzed profitability data for international cloud products (CVM, Lighthouse, GPU) across 8 regions and proposed pricing optimizations for underperforming SKUs
- Conducted competitive analysis of AWS, Azure, and GCP pricing across 50+ instance types, identifying opportunities to offer equivalent performance at 5-10% lower cost while maintaining positive margins
- Deployed Tencent HunYuan AI chatbot for internal operations team, automating pricing calculations and reducing manual workload by 80%, saving 15 hours per week across 6 team members

Projects

Stillbite | *React Native, Expo, SQLite, RevenueCat, EAS*

- Built and shipped a full-stack iOS meal journal app from scratch to App Store, featuring a photo-first logging flow with a custom pinch-to-zoom crop modal, with raw image persistence in SQLite enabling non-destructive re-cropping
- Engineered a subscription layer with RevenueCat and StoreKit 2, gating PDF export, streak/fasting insights, and a regression-based cycle predictor behind a paywall enforced via React context

Thread Library | *C++, Multi-threading, Context Management, Unix*

- Implemented a user-level C++ thread library on Unix with multiprocessor support, interrupt handling, and FIFO scheduling; designed spin-locks, mutexes, and condition variables using Unix context management

BluberiBuy — Fashion Retail Price Tracker | *JavaScript, Chrome Extensions, Canvas API*

- Built a Chrome extension that tracks real-time price history on luxury fashion platforms, featuring a Canvas-rendered sparkline chart with MSRP reference lines, episode-aware restock detection, and a recommendation engine combining linear regression with rule-based heuristics
- Engineered a JSON-LD structured data pipeline for stable price extraction on React SPAs, replacing brittle CSS selectors, with a storage abstraction layer and native ES module architecture requiring zero build tooling

Skills

Languages: C++, Python, JavaScript, TypeScript, Java, C, HTML/CSS, SQL

Frameworks & Libraries: React, React Native, Expo, Flask, PyTorch, Transformers, NumPy, Pandas, Jinja2

Tools & Platforms: Git, Linux/Bash, Docker, AWS S3, GitHub Pages, Vercel, GDB, CUDA, DDEV, Pantheon

Design Tools: Blender, Adobe Photoshop, GIMP, Aseprite
